## **Amendment to the Abstract**

Please replace the Abstract on page 18, with the following amended abstract:

## ABSTRACT:

This invention includes apparatus and methods for merging Merging of overlapping two-dimensional (2D) images which that are formed by a an image pick-up device as projections of a three-dimensional (3D) scene. In particular, the merging includes image registration by projective transformation of one of the 2D images. The transformation being is derived from corresponding feature points found in both images. In order to achieve improved accuracy and stability, the coordinates of the corresponding feature points are chosen or are translated so that, on average, the numerical ranges of coordinate values are minimized. Apparatus of the invention An apparatus for performing the merging of overlapping 2D images includes an appropriately configured image processor or computer with an attached image acquisition device. The which in In one embodiment, the apparatus is a diagnostic x-ray apparatus.
